

Conflict Minerals Policy

Conflict Minerals Policy

Metals such as tantalum, tin, tungsten and gold are used in many industries. Some of these minerals originate in the Democratic Republic of the Congo and its neighbouring countries. Mining minerals in these conflict-affected areas, and purchasing minerals originating from them, may finance armed groups that have been linked to human rights abuses. For this reason, these four metals are known as conflict minerals.

Stera Technologies is committed to a socially responsible supply chain and does not tolerate human rights abuses. Stera commits to:

- Supporting the objectives and goals of EU legislation concerning conflict mineral sourcing.
- Not knowingly sourcing certain types of metals originating from facilities in conflict-affected areas that have not been certified as "conflict-free".
